The first Volkswagen conversion with a rigid, insulated, elevating roof.

The CI Kamper heralds a real breakthrough in motor caravan design with an entirely new high rise roof – double skinned and fully insulated – that provides quiet, warm and spacious surroundings for the occupants of the upper double bed. The roof is easily elevated with assistance from gas filled struts, and a rooflight with flyscreen provides variable ventilation. For

even greater ventilation in hot weather or for even better viewing at sporting events one of the sides can be folded away without affecting the stability of the roof.

The unique design of the Kamper doesn't just stop at roof level though – an ingenious method of converting the rear bench seat to a 6' 1" × 4' double bed substantially increases the amount of space inside the vehicle in the daytime layout. This in turn allows a side facing seat to be fitted which simplifies dinette

seating. The very versatile seating arrangements are completed by a multi position, sliding, rotating and reclining seat behind the front passenger seat. In all the Kamper seats up to seven people.

The Kamper furniture is finished in wood grained Melamine – attractive in appearance, wipe clean, heat and scratch resistant. All the windows are fully curtained. The caravan body sides are insulated up to window level and the entire floor area including the cab is carpeted.

Other standard features of the Kamper include a gas/12 volt refrigerator, an integral stainless steel sink and cooker unit with a grill, and extensive storage facilities in wardrobe, cupboards, lockers and drawers, including a compartment to take an optional flushing toilet. A built-in 12 gallon water tank is fitted complete with an exterior lockable filler cap.

The free standing table – which can be used outside the Kamper for meals in the open air – stows behind the rear seat and

acts as a luggage cover. Alternatively the rear seat can be folded down and with the cushions and the rear drawer unit removed the Kamper is transformed into a roomy estate car with forward facing seating for three. A roof rack above the driving compartment is standard equipment.

Finally, a safe ‘blown air’ heating system, second battery and control panel are offered as a complete optional extra pack. The spark ignition heater unit is linked to the Volkswagen

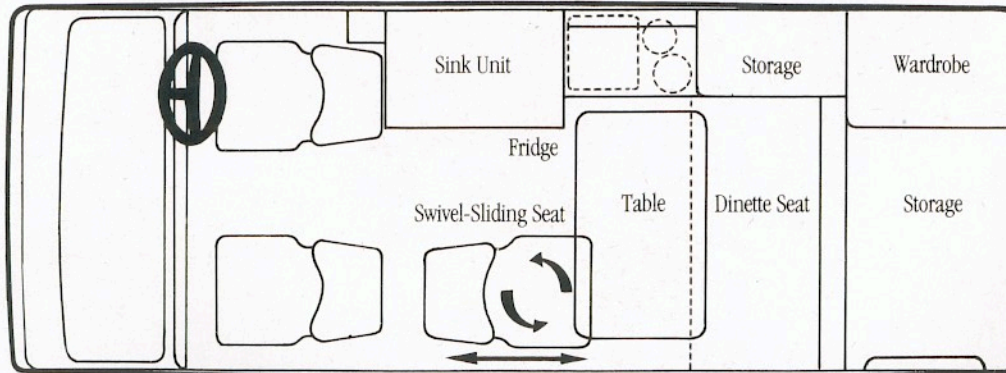

fresh air heating duct and, by operating a dashboard switch, warm air is directed to the Kamper interior through the rear heater outlets at floor level. The heater unit and its air intake and exhaust are safely fitted outside the living area of the vehicle.

The CI Kamper offers the best of all worlds – a roomy estate car in the week and a comprehensively equipped and insulated motor caravan for weekends and holidays.

Seat with space for toilet and gas bottles underneath.
